

# Finally - A Mounting Block that Stays Put!

Heavy - No need to anchor to ground (but can be)

Will not tip when bumped

Rubber construction is safe for use around horses

Not effected by weather

Different heights available

Environmentally friendly

Mount block from either side

Plenty of room on block for instructor assistance

No need to remove from arena

Easy to move, but not portable

## 7 Mounting Block - Data Sheet 6

T	Steps	Tire Blocks	Price (\$)	Price/block	Height	Wt (lbs)
	1	1	6.50	6.50	8"	100
	2	3	18.00	6.00	16"	300
	3	6	34.50	5.75	24"	600
	4	10	55.00	5.50	32"	1000
	5	15	78.75	5.25	40"	1500
<i>Specify block height (optional) !</i>			Range is 4 to 12 inches			
Tire blocks are approximately 24" in diameter						

**Block Size** Tire blocks vary in height from below 6" to above 10" with most approximately 8" high. You can specify the height of the blocks if you want smaller or larger steps in your mounting block.

**Weight** A typical 8" tire block weighs approximately 100 pounds.

**Stability** When the tire blocks are stacked the shear weight keeps them in place. When stacking higher than 24" additional stability is suggested by driving a 2" pipe through the center of the block into the ground below or driving large staples/rods directly through the blocks.

**Relocating** Simply tip the block to its edge and roll.

**Availability** Pending Department of Environmental Quality approval for scrap tire use. You will be contacted when the Tire Block becomes available.
